No joy! Now I got the message:Adprep cannot run on this platform because it is not an Active Directory Domain Controller.. Tonight I'm trying to promote a spanking new Windows 2008 R2 server as a domain controller in an existing Windows 2003 AD.. [Status/Consequence]Adprep stopped without making any changes [User Action]Run Adprep on a Active Directory Domain Controller.. If you run adprep /forestprep for Windows Server 2008, confirm that the objectVersion attribute value is set to.. I promptly opened and Command Prompt on the R2 server, navigated to the supportadprep folder and ran adprep /forestprep.
